## i3 lite App

**i3 lite App** - is an app for a tablet or a smart phone, that enables to use control projects created by an integrator. The app enables to

- **Download projects from the cloud** - When a project is created an integrator saves it in the cloud and gives an end-user a download link. This technology gives a convenient mechanism to download a project, as well as enables users to get updates without leaving home.
- **Download project via a QR-code** - If a project is made for numerous users, an integrator can give a user a QR-code via which any user of the system can get a control project by scanning the QR-code from i3 lite app.
- **Use projects** - The app is made to use control projects. A user of an app can have many control projects, that's why the app has a convenient mechanism of switching among project and work with the cloud.
- **Share projects** - Users of the system can share control projects with other users of the system at any moment.
- **Change the graphic style of a project** - The app has a feature of changing the graphic style of a project. Many graphical styles are available to users, that can be used and changed in a project.

## How to Start

i3 lite App is available for download at [App Store](#) and [Google Market](#). To work in the app a user is to get authorization. When launched for the first time, the app will ask the user to authorize.

!!!Поставить скрин авторизации в конфиге!!!

After successful authorization a user will see the main window of the app that enables to:

- Download a project from the cloud
- Download a project via a QR-code
- Edit projects

!!!картинка главного окна!!!

## Project download from the cloud

All received projects automatically get into the cloud. When a new mobile device is used to work in i3 lite, a user can restore all projects, received before. To do it, go to the **Cloud** section. To download a project on a panel, choose the required project and in the window that appears choose **Download Project**.

## Editing a project

To edit a project, choose a project in the list of projects. Every project has editable properties:

- Project name is the name of a project that is displayed on a device and in the cloud.
- Project icon is an icon of a project in the list of projects.
- Project style is the graphical style of the interface that can be changed by both an integrator and an end-user.
- Users and devices - if a user has a status of a project administrator, he can share the project with another user from the device by entering his login in "Invite user field". In this field an integrator can see a list of panels where the project was downloaded and edited.

!!!картинка свойств проекта!!!

## Project upload into the cloud

Every user can save a project in the cloud. To upload a project into the cloud, go to the **Cloud** section and select **Upload to Cloud**. After this a project is saved in the cloud.

## Giving a project to the user

The administrator of a project can send a download link to any user of the system. To do it, open a project, go to **General** tab and select **users and panel** section. Select **Invite user** and in the window that appears enter the login of i3 lite user. When this is done, a link to project download is sent to the user. In this section an integrator can also see a list of panels that use this project. An integrator, as an administrator, can delete panels from this list to save place for other panels in the license [More about licensing](#).
