

```
//Getting data in a module is done via module.GetProperty; //Data received in a module after
installation var l_sType = module.GetProperty("Type"); //refer to a module name that was written in
ModuleData in Module object ... </syntaxhighlight> |attentions=Format to record data for a module:
```

```
var l_oModuleData = {
    Module: {
        Field: Value,
        ..
    },
    Drivers: {
        Name: {
            Field: Value,
            ..
        },
        ..
    }
}
```

- Module - module object that receives data for its work:
 - Field - property name that can be received in a module via module.GetProperty
 - Value - value of this property
- Drivers - object of used drivers
 - Name - driver name, for which data have to be set
 - Field - name of driver property
 - Value - value of this property

```
}}
```
