B.getModule

to get the module object. The module object is used to get access to module resources

Syntax

B.getModule(ModuleID)

input	sample	description
ModuleID	ModuleID	type: number the module identifier
output		
Object		type: Object the module object

Example:

```
IR.AddListener(IR.EVENT_MODULE_START, , function (ModuleID){
    var Module = B.getModule(ModuleID);
})
```

Instead of the listener of the event IR.EVENT_START the listener of the event IR.EVENT_MODULE_START is used in the lite module. It sends the ModuleID parameter as Callback.
