5.8. Script part of the server module

The script part of the server module **is required** for correct work of the server module together with the panel one.
Before writing the script we recommend to gqt acquanted with section 5.1. "Basics of the script part" and [iRidium API](#) as there you can find description for developing scripts for i3 lite.
The script part for work of the server driver can be divided into 2 types:

- The script of the static module :
- The script driver.
