

**Script development.**

Set up the scanner properties. It is recommended to create an array of "properties" object for that, for example:

```
var properties = [{  
    "type": "textfield",  
    "name": "Host"  
}, {  
    "type": "textfield",  
    "name": "Port"  
}, {  
    "type": "textfield",  
    "name": "Login"  
}];
```
