

If you specify the "select" type it is required to indicate the "Value" field, which stores an array of objects:

```
{
  DeviceType: "HTTP",
  Parameters:[{
    Name: "Host"
  },
  {
    Name: "Port"
  },
  {
    Name: "Type",
    Type: "select",
    Value: [
      {
        Caption: "1 bit",
        Data: "00"
      },
      {
        Caption: "2 bit",
        Data: "01"
      },
      {
        Caption: "4 bit",
        Data: "03"
      }
    ]
  }
]
```
