FAQ

What devices are supported in Gate for voice control?

Nowdays it supports:

- air conditioner
- binary contact
- sensor temperature
- sensor air quality
- binary_detector_motion
- binary_detector_smoke
- binary_detector_water_leakage
- sensor_humidity
- type_light
- through_dimmer
- through_relay
- curtain

I bought iRidium gate for voice control on your web-site (I was sent the server and the license code). But I have to use i3 lite for setting. Do I have to buy a license for i3 lite?

No, i3 lite license for setting is already included. But the license allows only to set a project in the configurator, but it does not allow to use i3 lite to control devices in the future.

I activated the code in My account on the web-site and now I can't a project with a server in i3 lite. I get "Wrong license key" message.

Create a project without a server, add a server in the configurator. In My Account on the web-site you have a license, assign it to the project.
